I'm a full-stack software engineer from Poland. My interests spread across everything software-related. Software architecture, team management, UX design, all contribute to a successful product. And as they do, I'm curious about them.

About

I'm also fascinated by the practices of Extreme Programming, Continuous Delivery, and DevOps. In my work, I strive to optimize for learning and managing complexity.

I want to do what works to make better software faster, and to create real value for the users.

Experience

Webfleet Solutions

Mid Software Engineer
11.2022 – now

Junior Software Engineer
04.2022 – 10.2022
